

Reaching the
winding bed
of a river system
carved in the
Eigg basaltic
plateau, filling
it to the
brim, the
suspension
collapsed and
cooled, becoming
the pitchstone
that now
forms the
Sgurr.

What are the
oldest rocks ever
found

The oldest intact
rock found on
Earth to date is
from the
Acasta Gneiss
complex of
northwest
Canada.

How Eigg
was formed

A pyroclastic
flow - a hot
suspension
of rock particles
and gases -
swamped the
landscape.
